Description

Designed for healthcare professionals like you, the Fellowship in Diabetes Mellitus is the final step in becoming an expert in the field of diabetes, thereby managing diabetic complications. It also includes the treatment of diabetes in special populations, permitting you to administer the optimum care.

As part of the course, you will also learn about the latest research and best practices for preventing and managing diabetes-related complications, such as diabetic ketoacidosis, retinopathy, nephropathy, and neuropathy.

The Fellowship in Diabetes Mellitus incorporates a case-based learning approach within the Medvarsity Learning Framework to give a practical approach to medical education. This unique methodology offers pertinent medical content and interactive case studies to aid in effective concept learning.

This course offers comprehensive coverage of the prevention and management of complications associated with diabetes and training under the supervision of field experts as a part of the contact program. The experience of practical training in a leading corporate hospital will give you much-needed clinical experience and an opportunity to put into practice the concepts learned during the course.
